

murkytop (Malware Family)

By Fraunhofer FKIE

Archived: 2026-04-05 16:23:05 UTC

a command-line reconnaissance tool. It can be used to execute files as a different user, move, and delete files locally, schedule remote AT jobs, perform host discovery on connected networks, scan for open ports on hosts in a connected network, and retrieve information about the OS, users, groups, and shares on remote hosts.
