RedPacket Security is not affiliated with any ransomware threat actors or groups and will not host infringing content. The information on this page is automated and redacted whilst being scraped directly from the KRYBIT Onion Dark Web Tor Blog page.

Ransomware group:

KRYBIT

Victim name:

FRAPER[.]COM

AI Generated Summary of the Ransomware Leak Page

The leak post concerns the Spanish company fraper.com, identified as a victim in the incident tied to the threat actor group krybit. The page portrays Comercial Fraper S.L. as a privately held Spanish business specializing in building materials, tools, and household supplies. The available metadata indicates the post date is 2026-04-07, which serves as the publish date for this entry. The post is framed as a data exposure event associated with ransomware activities, though the available information does not specify the nature of the compromise beyond the claim of breaching the organization and potentially exfiltrating data.

The post does not list a ransom amount, and there are no visible screenshots or images accompanying the entry—there are zero images reported on the page. The presentation focuses on the victim's identity and a general claim of a data-leak scenario commonly seen in ransomware operations. Based on the information provided, fraper.com is characterized as a European-based building materials supplier impacted by the incident, with no additional details on the scope of data affected or the extent of encryption or exfiltration disclosed in the post. The page indicates a disclosure of information related to the attack without offering concrete evidence or publicly released files within the entry itself.
