

WhiteBird (Malware Family)

By Fraunhofer FKIE

Archived: 2026-04-05 14:06:28 UTC

According to Dr.Web, WhiteBird is a backdoor written in C++ and designed to operate in both 32-bit and 64-bit Microsoft Windows operating systems. The configuration is encrypted with a single byte XOR key. An interesting feature is that the malware can be restricted to operate only within certain "working_hours" with a granularity of one minute.
