

EKANS, Software S0605 | MITRE ATT&CK®

Archived: 2026-04-05 17:06:47 UTC

[EKANS](#) is ransomware variant written in Golang that first appeared in mid-December 2019 and has been used against multiple sectors, including energy, healthcare, and automotive manufacturing, which in some cases resulted in significant operational disruptions. [EKANS](#) has used a hard-coded kill-list of processes, including some associated with common ICS software platforms (e.g., GE Proficy, Honeywell HMIWeb, etc), similar to those defined in [MegaCortex](#).^{[1][2]}
