Overview

AI-Powered SaaS Security for Email, Web Browsers, and Collaboration Tools Protects Users Across the Modern Workspace

The solutions deliver a powerful, layered defense for cloud-based email services such as Microsoft 365 and Google Workspace. They can be deployed together as an integrated platform or separately.

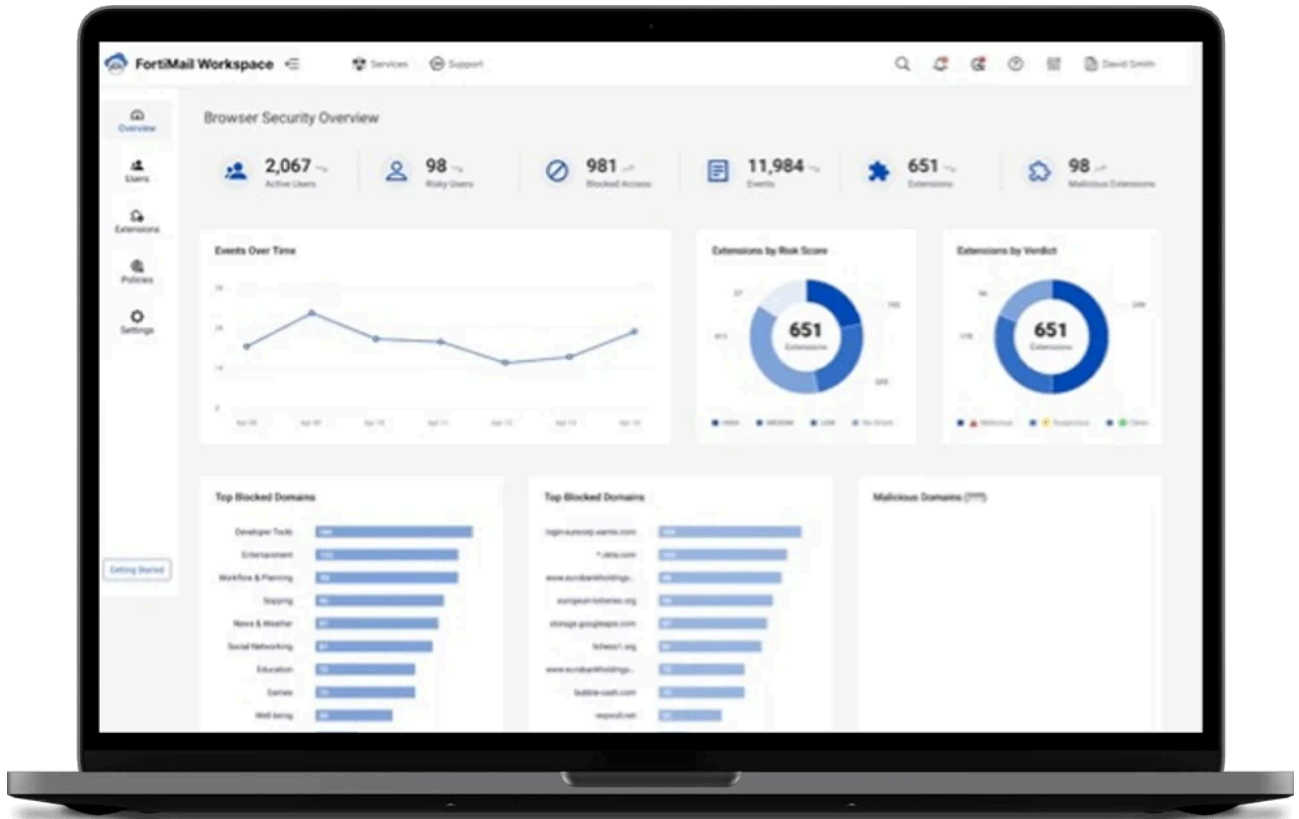

FortiMail Cloud SaaS

The email threat landscape has become more hyper-targeted with advanced GenAI-driven attacks that can bypass traditional detection security solutions.

FortiMail Cloud SaaS is the email component of the FortiMail Workspace Security suite. FortiMail Cloud SaaS, an integrated cloud email solution (ICES), leverages patented dynamic and static technologies to scan 100% of traffic, with high accuracy, to detect and neutralize a wide range of email threats across Microsoft 365, Google Workspace, and other cloud or on-premises services.

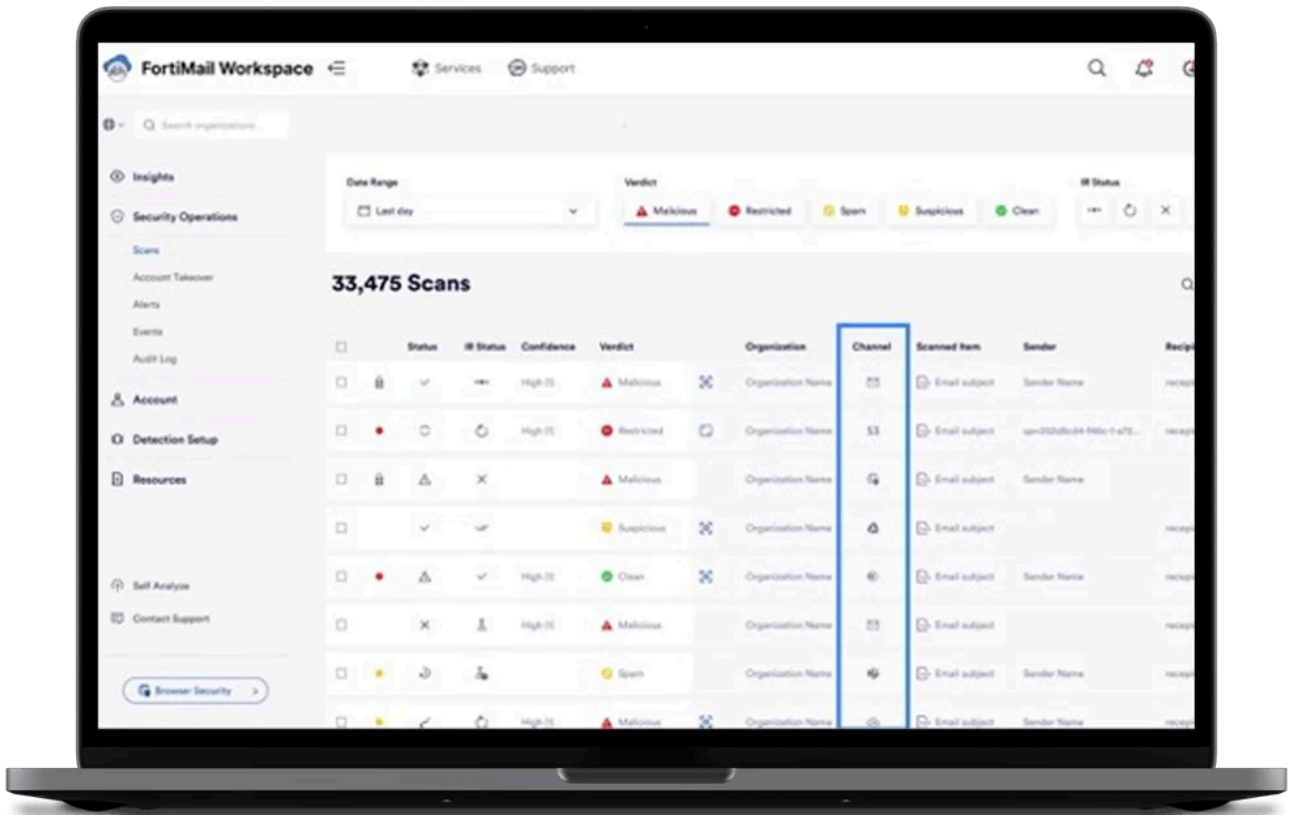

Recognized as a Visionary in 2024 Gartner® Magic Quadrant™ for Email Security

Browser Security

Browsers are among the most used applications and a prime target for sophisticated malware that can evade traditional security.

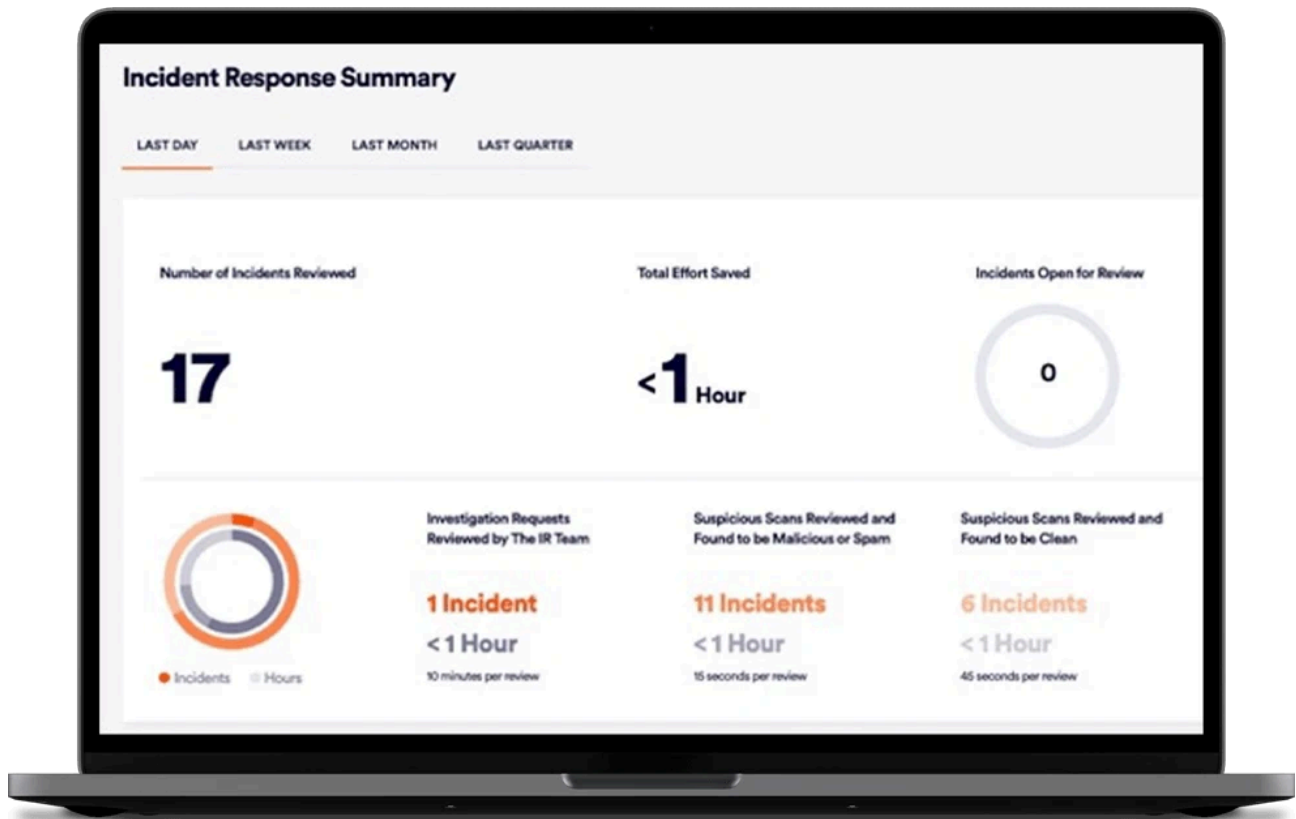

Browser Security protects browsers and web apps against web-borne attacks and data loss. It seamlessly integrates with any browser for real-time protection, dynamic security, and visibility with zero impact on user experience or browsing quality.

Collaboration Security

In today's digital workspace, collaboration, messaging, and cloud storage apps have become integral to daily operations, each introducing security risks.

Collaboration Security secures cloud collaboration apps, including cloud storage platforms like Dropbox and OneDrive, messaging tools, such as Teams and Slack, and CRM/support apps like Salesforce and Zendesk.

AI-Driven Incident Response, Managed by Experts

Included with the FortiMail Workspace Security suite is a fully managed, 24x7 incident response service. Security analysts operate as an extension to your SOC to monitor, analyze, and triage all flagged activity across email, browsers, and collaboration apps to review security incidents, optimize policies, manage false positives, and deliver rapid remediation. This offloads SOC workloads, accelerates threat response, and ensures continuous protection with zero operational overhead.

Features and Benefits

FortiMail Workspace Security extends AI-powered protection beyond email, ensuring consistent, user-centric defense across the modern workspace.

INTEGRATED WORKSPACE SECURITY

FortiMail Workspace Security protects email, browsers, and cloud apps with a unified dashboard

AI-POWERED PROTECTION

AI- and ML-based anomaly detection and dynamic content analysis detect threats

REAL-TIME THREAT REMEDIATION

A recursive unpacking engine scans all files and URLs to prevent threats from reaching users

SIMPLIFIED MANAGEMENT AND INTEGRATION

A unified dashboard delivers threat and live incident visibility with native cloud app integrations

CLOUD COLLAB PLATFORM PROTECTION

Seamless integration with M365 and Google Workspace strengthens native defenses against attacks

MANAGED INCIDENT RESPONSE SERVICE

Security events are managed and remediated 24/7, reducing SOC resource needs

Use Cases

Inbound and Internal Email Protection

FortiMail Cloud SaaS defends against advanced threats with dynamic content inspection, anti-evasion, and expert remediation.

Advanced Protection Against ATO and BEC

FortiMail Cloud SaaS detects and blocks stealthy, payload-free attacks with account takeover protection and login event visibility.

Protection against sophisticated evasion techniques

FortiMail Cloud SaaS scans all files and URLs in real time with anti-evasion technology to detect and block evasive malware

Streamlined Protection for M365 and Google Workspace

Cloud-native security comes with easy setup and layered protection for M365 and Google Workspace

Secure Web Browsing and Shadow IT Prevention

Browser Security secures web browsers with AI-powered image/text analysis, anti-evasion, sandboxing, and malicious URL detection.

Protection for Collaboration Apps

Collaboration Security instantly scans all files and messages across collaboration tools to stop threats without disrupting productivity.

Enterprise Analyst Recognition

ANALYST REPORT

2025 Gartner® Magic Quadrant™ for Email Security

- 2025 Gartner® Magic Quadrant™ for Email Security

A Challenger in Email Security

Fortinet is recognized as a Challenger in 2025 Gartner® Magic Quadrant™ for Email Security. We believe this recognition reflects the strong capabilities and continued evolution of FortiMail Email and Workspace Security within our broader email security portfolio.
