Get timely, tactical, and strategic data on the global threat landscape. So you can make more informed, risk-based decisions.

Threat intelligence reporting

Stay ahead of the game with technical reports on new targeted attack campaigns, as well as strategic reporting on a particular region, sector, or actor of interest to your organisation.

Threat intelligence data

Monitor ongoing threats with a high-confidence feed of single value indicators associated with targeted attacks. Access network IDS and file detection signatures. Contextualise relationships between indicators and threat actors. Formats supported include network detection (via Suricata or Snort) and end point detection content (via SIGMA or Yara).

Threat intelligence portal

Use this site as a resource to access the most relevant threat research to your organisation, including our reporting, technical data, and threat actor information. Query threat data, including indicators of compromise, and tailor feeds to your areas of interest.

Threat context

Access a private collaboration space, with direct access to our analysts, providing broader context around the threats you're investigating. People and technology work hand in hand to deliver faster, more intelligent and better outcomes.
